- Video Games

Education

Highschool **Sep 2016 - Jul 2021**
Language School "Plovdiv", Plovdiv
Average grades on the higher end. Studied mainly English.

Bachelor's Degree in Software Engineering **Sep 2021 - Present**
Plovdiv University "Paisii Hilendarski", Plovdiv
Full scholarship. Perfect marks.

Employment

Various part-time jobs in different fields **2018 - 2021**
Fast food restaurant employee, courier, AC maintenance and installation technician, and pool lifeguard - I mention them because they helped me develop different skills required for each job, which are applicable outside of their respective fields.

Java Backend Intern **Jul 2022 - Apr 2023**
Infinno, Sofia
A complete walkthrough of the Java language was provided during the internship. It felt more like an academy with daily lectures and homework assignments covering various topics such as algorithms, data structures, SQL, and the implementation of existing technologies. The teaching method employed by the company involved initially explaining the theoretical aspects of a particular technology and then having us implement it independently in Java. This approach covered a wide range of topics, from existing data structures to web servers, Maven, Spring, Thymeleaf, Grep, MyBatis, and more.

Java Backend Junior **Apr 2023 - Present**
Sirma Business Consulting, Sofia
I am currently developing web applications with Java EE and Apache Struts 1 for BNB. We use Oracle for our database, WebLogic as the application server, and Hibernate for Object-Relational Mapping (ORM). On the frontend, we implement Primefaces. Although the frontend is developed by backend developers, I wouldn't go as far as to call myself a full-stack developer.
